DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a photo mask set, classified in class 430, subclass 5.
- II. Claims 7-20, drawn to a semiconductor device having multi-layered interconnection lines, classified in class 257, subclass 758.
- III. Claims 21-22, drawn to a method for forming multi-layered interconnection lines in a semiconductor device, classified in class 438, subclass 118.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, the group I invention is deal with photo mask set for opaque patterns and the group II invention is deal with a semiconductor device having multi-layered interconnection lines.

Inventions III and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the group II invention could be made by a material different process. For example, selectively forming an upper interconnection line, instead of forming an upper interconnection line suing a photolithography process that includes a photo mask based on the slope profile.

Art Unit: 2811

Because these inventions are distinct for the reasons give above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
